

EFFECTS OF THE DANA: Inspection work on the Valencia-Alicante gas pipeline (24') and Valencia-Alicante (20') at Alfarb.

On the morning of 7th November, inspection work was completed on the Valencia-Alicante (24') and Valencia-Alicante (20') gas pipelines in the municipality of Alfarb, concluding the sectorisation of these pipelines between positions 15.17 (Carlet) and 15.16A (Llombai).

In view of the above, the flow of gas on these pipelines between the positions indicated has been normalised.

The supply to demand in the Levante area has not been affected by this sectorisation and the emission from the regasification plants in Cartagena, Sagunto and Barcelona has been adjusted at all times during the course of the works to the needs of the gas system as a whole.
