

DECLARATION OF EXCEPTIONAL OPERATING SITUATION – ZERO LEVEL – UNAVAILABILITY OF EUSKADOUR COMPRESSOR STATION

On February 8th 2023, an incident occurred in the electrical transformers that feed the motor compressors of Euskadour compression station. Repairs have been ongoing since then, which have enabled an improvement in the situation of the infrastructure, although the full performance of the same has not yet been achieved.

At this time, after conducting the relevant verification tests, the Irún EC is available to guarantee an export capacity to France through the VIP Pyrenees of 225 GWh/day under the pressure conditions agreed upon by operators in normal operating situations.

However, it is still not possible to guarantee the 265 GWh/day that had been expanded since November 1st, 2022, so the declaration of an Exceptional Operating Situation level ZERO (SOE-0) remains in effect in accordance with section 10.6 of the NGTS.

Gas supply has been maintained at all the programmed demand in every moment.
